Form from shape

Basic Shapes of Ignatius

# Finding Form Where There is None: St. Ignatius Chapel

Form is a physical manifestaion of a concept or idea. It has mass and it has density because it exists in the physical realm. The form of a building is the shape that the building takes. One can think of form as a combination of the different shapes coming together to create one entity or a building.

St. Ignatius Chapel has a very unique form. It is one that seems to have no rhyme or reason behind it, but that is exactly what the form is. Its form is that it has no common form. Its parts are random shapes that when put together make a beautiful building that many people enjoy.
